Please provide a description of the methods used to solicit community input on community needs (attach additional pages if necessary): Frisbie Memorial Hospital convened a consulting team, Health Strategies Plus, and a steering committee comprised of local health and human services leaders to assist in an assessment of community health needs. The key objectives of this assessment were to identify and prioritize the health needs of Strafford County, to create a document that would serve as a guide for community health improvement and to establish a baseline for future comparison. There was quantitative and demographic data collected from the steering committee, State and County data sources. The steering committee provided feedback on quantitative and qualitative data; participated in several meetings, focus groups research, refined community health needs, resources and service gaps, and worked toward consensus

around prioritizing needs identified. Qualitative data was collected from two unique focus groups including steering committee members and community members.
